

FREE Pad-Pak™ Program

Tell Us About an SCA

If you have used a HeartSine® samaritan® PAD during a Sudden Cardiac Arrest (SCA) in a public setting, it's critical that you TELL US, by providing HeartSine with the Saver EVO™ file that contains comprehensive event data about the event and a completed Customer Event Form. This information is used by HeartSine to measure the success of our Automated External Defibrillators (AEDs) and to continually improve our products to ensure optimum results. When you provide the Saver EVO file, along with a completed Customer Event Form, we'll send you a free Pad-Pak for your efforts!

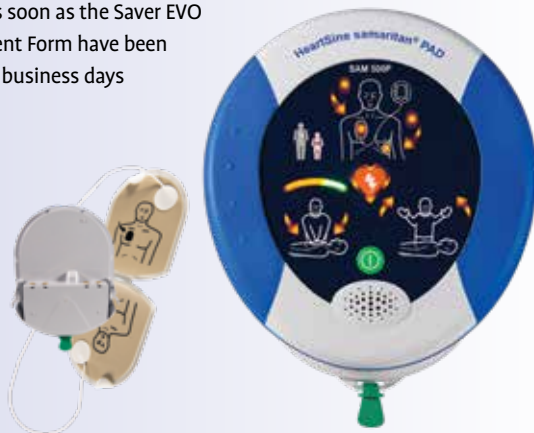

FREE Pad-Pak Process

- ▶ Immediately after the use of the HeartSine AED during an SCA, contact HeartSine to report the event and outcome.
- ▶ Immediately after the SCA event, follow the instructions in the Saver EVO manual to download the event data (.evo file) and submit it to HeartSine at www.heartsine.com/defib. Please note that a pdf of the .evo file will not be accepted; only the original .evo file can be used for verification.
- ▶ Complete and submit at www.heartsine.com/defib the HeartSine Customer Event Form with information about the patient. Please note, only information requested on the Customer Event Form should be provided. All other patient information should remain anonymous.
- ▶ HeartSine will send the free Pad-Pak as soon as the Saver EVO (.evo) file and completed Customer Event Form have been received and verified. Please allow two business days for verification.

Terms

- ▶ The event must be an actual sudden cardiac arrest to qualify.
- ▶ The event is verified by the HeartSine Clinical Team, whose decision is final.
- ▶ Exclusions apply. Please contact your sales representative for details.
